

BASIX PROTOCOL

Basix Protocol is a deflationary rebase system with NFTs and gaming system.
It's a protocol on Ethereum Network.

1. Introduction To Basix

"What are we?"

After studying all differences, variety and inundation of protocols, we came to the conclusion that the majority of them failed due to inflationary models and limited or lack of usage. Creating an overflow of wasted ideas.

That is why we created a combination of the two best protocols Ampleforth and YFI creating an improved and deflationary version of their functions.

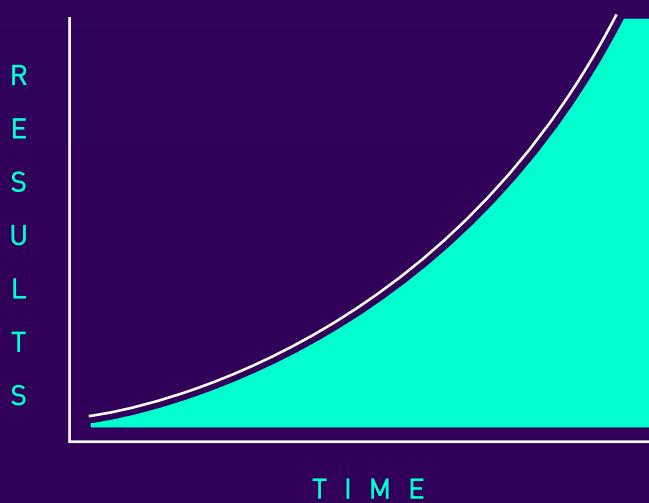

After this, we believed that it was not enough incentive, we wanted more and to go further, so we decided to give an additional usecase to the token, an entire ecosystem of NFTs. The NFT ecosystem in BASIX will allow all users to create NFTs and sell, buy, trade or stake our own NFTs as well as those of other projects.

We still felt our token was not at its maximum and to avoid being considered too 'casual' and make it more complete, we have also decided to make it even more sophisticated and to create a game in which the use of the BASIX token (\$BASX) is always required.

OUR PROTOCOL AND ALL ITS EXTRA DETAILS are deflationary, so the token's value growth

EXPONENTIAL GROWTH

Improvements come slowly in the beginning, but your gains increase rapidly over time.

2. Basix Background

"Who are we?"

The Basix team has 6+ years of experience in many different industries and has more than 8 members.

We currently work in the following areas:

- UI/UX • Artistic designers • Animation creators • Video creator • Website developer
- Testing • Blockchain developer • Game developer • VFX (visual effects)
- CGI(Computer generated imagery or computer graphics) • Marketing • Security • Financial.

3. NFT ecosystem

The ecosystem of NFTs will be based on the following:

- All NFTs transactions will use ETH as a payment method and BASX (basix tokens will be burned by the protocol to make it more deflationary).
- To carry out any type of transaction, a fixed amount of Basix must be held (quantity to hold will be defined in the future).

Four (4) types of markets will be generated:

- Basix' Marketplace : It will be the marketplace dedicated for trading NFTs made by Basix.
- Artists' Marketplace : It will be the marketplace dedicated for community Artists who want to sell their NFT art pieces.

Partnerships' Marketplace: It will be the marketplace where partnerships can post their NFTs.

Auctions' marketplace: It will be the marketplace where unique NFTs will appear for auction.

4. Staking NFTs

For staking NFTs we will require X amount of BASX and Y time (it will be defined soon). For staking NFTs you need to hold BASIX tokens, some NFTs during X time.

There will be 1 Unique NFT that will be saved for the auction marketplace and 2 Legendary. This unique system will create demand and circulation of the NFTs as well as generate more holders for BASIX and more burning of tokens since any TX will continue burning tokens. The unique and legendary NFTs will have exclusive in-game functions to be created by BASIX as well as greater decision-making capacity in the governance of the protocol.

Normal to Rare: You need to stake 20 pieces of the Normal NFT, Hold the NFTs + 500 BASIX during 4 days.

Rare to SuperRare: You need to stake 10 pieces of the Rare NFT, Hold the NFTs + 750 BASIX during 8 days.

SuperRare to Legendary: You need to stake 5 pieces of the SuperRare NFT, Hold the NFTs + 1000 BASIX during 16 days.

Legendary to Unique: You need to stake 3 pieces of the Legendary NFT, Hold the NFTs + 2000 BASIX during 32 days.

Unique and Legendary holders will have access to an exclusive chat to decide new NFT designs and other direct decisions.

5. BASIX Gaming

Basix will create a game based on the mythical Japanese game "Street fighter" creating a fighting ecosystem with our NFT characters.

Each game will have a cost of X Basix tokens and the winner will get the BASX of his rival.

From each item, 2% of the required BASX will be burned, so the system will be even more deflationary (the most deflationary system in existence).

Legendary NFTs will have a special animation and the unique NFT besides containing the special animation will also execute his rival if his life is at 0.5% and will carry out an exclusive 'celebration' like in the game "Mortal Kombat".

6. BASIX Governance

For the future, governance will be created where decisions will be made about the staking time, rewards, changes in the game, etc. so that the great holders of the project can make direct decisions together with us.

We will announce the operating model of governance in the future.

7. Project Vision

In the project we have many members working day and night for the project and we hope that there will be a great adoption to be able to maintain the protocol and continue developing. We thank all of you for your collaboration and we ask that you help us to make our project grow in order to continue maintaining our work in the best possible way.

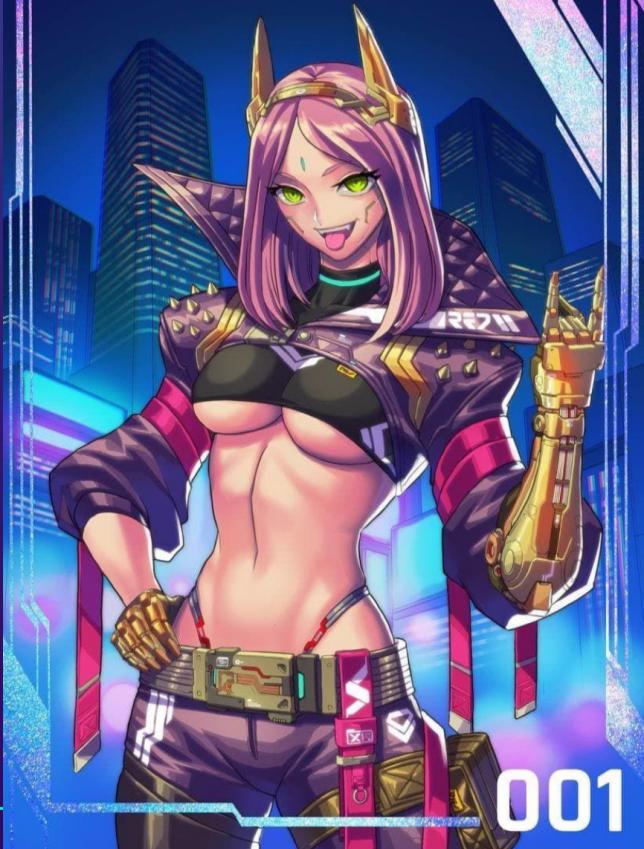

8. Anime ART

The basix team has Japanese manga and anime artists who allowes us to create unique works of art.

For example:

Yuka (有香)

Yuka (有香)

Yuka is our heroine who fights against a corrupt economic system to return power to the people.

Yoshio Nishina (仁科 芳雄)

From the underworld Yoshio arrives to destroy all the beasts that we will find in our BASIX world!

Yoshio Nishina (仁科 芳雄)

Heroes

A special and unique version created in support of the biggest crypto contributors
Elon Musk, Doge AND Snoop Dogg

Hina

Hina represents the Japanese doll festival that is why we all love our doll "Hina", with her katana she is able to cut the wind and is a specialist in fast movements.

► And many other characters with their stories that are yet to come!

9. Videos and animations

Since we are creating an ecosystem of NFTs along with their stories we have also decided to develop the animation of the designs in the levels legendary and unique. But this is not all, the Basix team is working on cinematics for the characters! It will be marvelous!

10. BASIX Ecosystem

Basix becomes the most deflationary crypto in existence as it introduces deflation concepts in all its ecosystem functions allowing all long-term holders to obtain large profits. Likewise, Basix will create his own story, game and characters for each of our investors to:

enter a new world of cyberpunk manga.
